Synthetic QR Security Test Set

120 unique QR-code samples for defensive app testing

Safety notice

These are synthetic test samples. Each QR code encodes a URL on the reserved .invalid domain, which is intended not to resolve as a public website. These are NOT live malicious QR codes and do not install malware.

Use this set to test scanning, payload decoding, unknown-signature messaging, upload/rescan prompts, risk explanation, and safe handling of unverified destinations.

These samples test the app workflow and UI; they do not validate real malware detection.
For model evaluation, use a vetted research dataset with provenance and licensing.
